Description

Stretcher SL ensures **safety** and **comfort** to the patients and **easy adjustments** and **manageability** to the medical personnel.

It features an **8 cm thick mattress** ensuring perfect patient comfort. It is upholstered in **biocompatible antistatic PU** material resistant to blood, urine, fat and disinfectants. The **welded** and **taped seams** contribute greatly to ensuring **high hygiene standards** as they prevent penetration of liquids.

Hydraulic height adjustment allows a wide **adjustment range between 57 cm and 104 cm.** It provides a very **low access position** for patients and **comfortable height** for the personnel during transport or treatment.

The **sturdy base** protected by the completely smooth **ABS plastic cover** and standard **250 kg safe working load** ensure the patient transport trolley's perfect stability.

Patient safety is guaranteed by a pair of **firm and sturdy safety rails (patent EP 3496694 and US 11110019)** and a possibility of adjustment in **Trendelenburg position** in case of emergency.

Due to **big antistatic castors with central locking system** enabling castors to move freely, in one direction or to be locked, the patient transport trolley is easy to maneuver along the hospital corridors. It features dual height **push handles** at the head section and an additional pair of fixed handles at the leg section. To prevent damage in case of accidental bumping, rubber **bumpers** are at all four corners.

Bring treatment to a higher level!
